

# TripKit travel catalogue research report

## Executive summary

For a strong TripKit proof-of-concept, the catalogue should not encode destination tags directly. Instead, it should expose enough ordinary retail attributes for an LLM to infer destination context from user language. That matters because the July leisure scenarios you named are materially different: official Japan tourism guidance describes summer as intensely hot and humid, with the rainy season running into mid-July; New Zealand's tourism guidance says July is the coldest month and winter conditions range from cool to cold, with more snow in the South Island and more rain in the North Island; Visit London describes July as the city's warmest month on average, while still leaving room for showers and occasional heatwaves; and U.S. summer travel content leans heavily toward roads, parks, scenic drives, and outdoor movement. That combination justifies seeding the catalogue around cooling, hydration, rain protection, walking comfort, transit-smart carry, road-trip utility, and winter layering rather than around destination labels. <sup>1</sup>

The dataset below is therefore designed as a neutral travel-gear catalogue with hidden inferential richness: product fields such as `use_cases`, `climate_suitability`, `travel_style`, and `trip_stage` are what make the later LLM behaviour look smart. Prices are stored in AUD and normalized to realistic non-sale Australian shelf positions where necessary; product definitions and specs are anchored primarily in manufacturer or official product pages, with Australian retail context used when it materially improves local plausibility. Concrete examples include July's Carry On at AU\$345 with 4.9 stars from 2,893 reviews, Osprey's Daylite Plus with 20L / 48 x 28 x 24 cm / 0.585 kg specs, Anker's 737 Power Bank at 24,000mAh and 140W, Patagonia's Torrentshell 3L with 4.4/5 public rating and three-layer waterproof shell, Hydro Flask's 21 oz bottle with 24-hour cold retention, and Pacsafe's Coversafe X100 with price, review count, RFID shielding, and slash-resistant strap. <sup>2</sup>

## Research basis

Official product pages were sufficient to anchor a large share of the core merchandising model because they often expose exactly the fields a demo catalogue needs: dimensions, weight, capacity, materials, battery life, major feature flags, and sometimes public review counts or direct pricing. Osprey's Daylite Plus page publishes 20L capacity, 48 x 28 x 24 cm dimensions and 0.585 kg weight; Peak Design's Tech Pouch page highlights organization geometry, cable pass-through and weatherproof recycled nylon; Anker publishes the 737 Power Bank's 24,000mAh capacity and 140W maximum output; Patagonia publishes public ratings, price and waterproof-shell construction on the Torrentshell page; Hydro Flask publishes dimensions, weight and thermal retention on the 21 oz bottle page; and Pacsafe publishes price, review count and anti-theft features on the Coversafe X100 page. <sup>3</sup>

Where pricing was obviously promotional or retailer-specific, I normalized to a more stable indicative AUD value rather than storing a temporary markdown. The clearest example is HOKA Clifton 9: The Iconic surfaced a strong sale price on one Australia listing, while HOKA's own product page provides the durable technical specification. For a demo seed dataset, a normalized shelf price is usually more useful than a

fleeting sale price, because it keeps sort/filter behaviour stable while preserving realistic retail positioning.

4

## Category and price distribution

The validated catalogue contains 100 items across 10 product categories. Pricing skews mid-to-premium, which is realistic for travel luggage, technical outerwear, footwear, premium audio, and power products.

| Category                          | Items      | Cheap under \$50 | Mid \$50-150 | Premium over \$150 |
|-----------------------------------|------------|------------------|--------------|--------------------|
| Carry-on luggage                  | 10         | 0                | 0            | 10                 |
| Backpacks and personal bags       | 12         | 0                | 4            | 8                  |
| Organizers and pouches            | 10         | 0                | 10           | 0                  |
| Power and charging                | 10         | 3                | 4            | 3                  |
| Audio and comfort                 | 10         | 1                | 5            | 4                  |
| Weather gear and layers           | 12         | 2                | 7            | 3                  |
| Footwear                          | 10         | 0                | 3            | 7                  |
| Security and documents            | 8          | 1                | 6            | 1                  |
| Hydration and hygiene             | 8          | 6                | 2            | 0                  |
| Outdoor and road-trip accessories | 10         | 0                | 6            | 4                  |
| <b>Total</b>                      | <b>100</b> | <b>13</b>        | <b>47</b>    | <b>40</b>          |

## Sample UI filter schema

This schema is derived directly from the product model and is constrained enough for LLM-controlled UI state.

```
{
  "search_query": "string",
  "filters": {
    "category": {
      "type": "multi_select",
      "options": [
        "Carry-on luggage",
        "Backpacks and personal bags",
        "Organizers and pouches",
        "Power and charging",
        "Audio and comfort",
        "Weather gear and layers",
        "Footwear",
```

```

        "Security and documents",

        "lightest_first"
    ]
}
}

```

## LLM context inference notes

- **Japan + July + leisure** should usually map to **Hot + Humid + Rain + Urban transit + Walking all day**, which biases the UI toward umbrellas, compact rain gear, breathable footwear, portable cooling, quick-dry textiles, and power for long city days. <sup>5</sup>
- **USA + July + leisure** should usually map to **Road trip + Outdoor sightseeing + Sun + Hydration + Comfortable shoes + Navigation**, because official U.S. travel content heavily features scenic drives, parks and summer road-trip planning, and Route 66 guidance explicitly calls out layering, comfortable shoes, sun protection, extra food and water. <sup>6</sup>
- **New Zealand + July + leisure** should usually map to **Cold + Wet + Wind + Layering + Road trip + Outdoor sightseeing**, with extra emphasis on shell layers, insulation, merino, waterproof footwear and hot-drink capacity. <sup>7</sup>
- **London + July + leisure** should usually map to **Mild/Warm + Possible showers + Urban transit + Walking all day**, which favors light layers, compact rain cover, cushioned walking shoes, compact bags and phone charging. <sup>8</sup>
- The model should infer **weather, mobility pattern, luggage constraint and trip stage first**, then set search, filters and sort. Destination remains an input to reasoning, not a stored product field.
- When the user asks for something the store does not explicitly encode, the LLM should use visible, explainable proxies already present in the schema rather than inventing unsupported destination metadata.

## Full catalogue JSON

The full catalogue has been validated as syntactically correct JSON and is ready to seed directly into a demo app or fixture pipeline.
